

# CARBON REDUCTION PLAN GUIDANCE

DataOps IT Ltd Organisations require suppliers wishing to bid for contracts to submit a Carbon Reduction Plan at the selection stage, detailing their organization's carbon footprint and their commitment to achieving Net Zero by 2050.

The bidding supplier must submit Carbon Reduction Plans that meet the reporting requirements, include their current carbon footprint, and commit to achieving Net Zero emissions by 2050.

The Carbon Reduction Plan (CRP) should be specific to the bidding entity or cover it and its parent organization if certain criteria are met. To ensure relevance, a CRP covering the bidding entity and its parent organization is permissible if detailed requirements are met in full, as per Technical Standard ii and Guidance iii.

## **Bidding Entity's Commitment to Net Zero**

- Bidding entity is wholly owned by parent.
- Parent's CRP commits to net zero by 2050 for UK operations.
- Bidding entity supports and adopts this commitment.
- Environmental measures for contract performance are stated.
- CRP is published on bidding entity's website.

Bidding entities must establish their own Carbon Reduction Plan (CRP) as soon as possible, recognizing that relying on a parent organization's plan may be temporary. The plan should be regularly updated, published, and signposted on the supplier's UK website. It should be approved by a senior leader within the supplier's organization and may be adopted into their strategic plans to demonstrate their commitment to emissions reduction.

The Carbon Reduction Plan template is provided, kindly complete and publish in accordance with the reporting standard outlined in the PPN.

## Carbon Reduction Plan

Company Name: **DataOps IT**

### **Our Core CSR Services**

#### **1. Carbon Footprint Reduction**

We analyse your company's energy use and suggest smart ways to cut emissions. One client reduced CO<sub>2</sub> emissions by 30 tonnes per year with a few simple changes.
